TECHNICAL SKILLS

PROGRAMING LANGUAGES

- **C# / Winforms** : ASP.NET MVC, Identity, Entity Framework, JWT, LinQ, Exception handing, Extension methods, Data annotations.
- **Other** : Java, PHP.

DATABASE

- **SQL Server**
- **MySQL**
- **Oracle, SQL Developer**

OTHER TOOLS

- **DOCKER** : Docker commands, Docker Compose, Dockerfile.
- **GIT / GITLAB** : Repository management, Branching & Merging, Push and Pull.
- **POSTMAN** : API Testing.
- **CLAUDE CODE** : **AI coding assistants** to review, refactor and document code faster.

OTHER SKILLS

FRONT-END

- HTML, CSS, SCSS
- Javascript, jQuery
- Responsive design

ENGLISH

- Capable of comprehending English documents.

Objective

I am a C# developer with 1 year building a large-scale HIS (WinForms/DevExpress/MEF) and ASP.NET MVC web applications, shipping 60+ releases across pharmacy, warehouse, billing, clinical and blood-transfusion modules, with strong end-to-end debugging skills and AI-assisted development workflow.

Education

HUTECH - Ho Chi Minh City University of Technology 2020 - 2024
GPA : 3.13/4.0

Experience and Projects

Software Developer

April 2025 - July 2026

Vietsens Technology Group

Build and maintain modules on a production hospital system (1000+ plugins, WinForms + DevExpress, .NET 4.5) used daily by doctors, pharmacists and cashiers.

- Delivered features across **pharmacy & warehouse** (stock, imports, stock-transfer slips, medicine/material creation) and the medicine-dispensing slip.
- Lead developer of the **PrintBordereau** reporting library — the year's most iterated module — plus aggregate export-slip print filters.
- Fixed clinical workflows: paraclinical (CLS) service execution, specialist-exam approval, blood-bag management and pre-transfusion checks.
- Synchronised cross-match lab results from LIS into HIS; reworked advance-refund and billing transactions and the patient queue-display screen

Key Technical Work

IntegrationEMR JSON conversion library

- Built a reusable library that encrypts and imports patient transfer records into the external **EMRTOOLKIT** system over a 3-step secured HTTP flow (token → encrypt JSON → import), with TLS 1.2 and resilient response parsing so any plugin can call it.

Digital signingPatient certificate registration

- Developed the module that issues and registers **digital certificates** for patient documents, wired into the EMR digital-signing flow.

Personal · Alcodeassist — AI coding agent CLI

- Built a C# / .NET 8 terminal coding assistant on the Anthropic SDK that runs an **agentic tool-use loop** — the model reads, searches and writes files in a workspace until it can answer — with path-confined tools.

AI-Assisted Development

June 2026 - June 2026

Uses AI coding assistants and prompt engineering as part of the daily workflow to work faster and keep quality high on a large legacy codebase.

- Writes targeted prompts to **trace bugs** across UI, API and data layers and to locate root causes in unfamiliar plugins.
- Uses AI to **review code, refactor** anti-patterns ($O(n^2)$ loops, $N+1$ lookups) and enforce naming and logging conventions.

- Communicate and work with colleagues in English.
- Generates **boilerplate and module documentation** from templates, then reviews and corrects the output before committing.

ACTIVITIES

- IT Job Fair / IT Career Open Days
- Voluntary blood donation activity

INTERESTS

- Swimming
- Badminton

Delicado furniture e-commerce website

Jun 2024 - Aug 2024

GitHub: github.com/danghandsome/NoiThat_ASP.NET_MVC

Team size : 2 (Team Member - Backend Developer)

Description : Built with ASP.NET MVC offers a refined online shopping experience, specializing in elegant and sophisticated home furnishings. Provided function for managing products, orders, shopping carts, wish list, etc.

Responsibilities :

- Programming and developing login functions using **Facebook** and **Google** APIs, utilizing Meta for Developer and Google Authentication.
- integrating **chatbox** feature with Meta Business Suite API.

Technologies : ASP.NET MVC, C#, ENTITY FRAMEWORK, HTML/CSS/JAVASCRIPT, BOOTSTRAP, SQL SERVER, API, GIT.
