TECHNICAL SKILLS

LANGUAGES & FRAMEWORKS

- **C# / Winforms :** ASP.NET MVC, Identity, Entity Framework, JWT, LinQ, Exception handling, Extension methods, Data annotations.
- **Other :** Java, PHP.

DATABASE

- **SQL Server**
- **MySQL**
- **Oracle, SQL Developer**

OTHER TOOLS

- **DOCKER :** Docker commands, Docker Compose, Dockerfile.
- **GIT / GITLAB :** Repository management, Branching & Merging, Push and Pull.
- **POSTMAN :** API Testing.
- **CLAUDE CODE :** **AI coding assistants** to review, refactor and document code faster and to build tools (agentic loop, tool-use).
- **DEPLOYMENT / CLOUD:** Vercel (serverless functions, CLI deploy, env secrets), Cloudflare Workers (Wrangler CLI), GitHub Pages & Actions (CI/CD).

OTHER SKILLS

FRONT-END

Objective

I am a C# developer with 1 year building a large-scale HIS (WinForms/DevExpress/MEF) and ASP.NET MVC web applications, shipping 60+ releases across pharmacy, warehouse, billing, clinical and blood-transfusion modules, with strong end-to-end debugging skills and AI-assisted development workflow.

Education

HUTECH - Ho Chi Minh City University of Technology *2020 - 2024*

GPA : 3.13/4.0

Experience and Projects

Software Developer — *April 2025 - July 2026*

Vietsens Technology Group

Build and maintain modules on a production hospital system (1000+ plugins; WinForms + DevExpress, .NET 4.5) used daily by doctors, pharmacists and cashiers.

- Delivered **pharmacy & warehouse** features (stock, imports, transfer slips, medicine creation) and the medicine-dispensing slip.
- **Lead developer of the PrintBordereau** reporting library — the year's most-iterated module — plus export-slip print filters.
- Fixed clinical workflows: CLS service execution, specialist-exam approval, blood-bag management & pre-transfusion checks.
- Synced **LIS** → **HIS** cross-match results; reworked advance-refund/billing and the patient queue-display screen.

Key Technical Work

- **EMR integration lib (JSON):** Reusable library that encrypts and imports patient-transfer records into the external EMR toolkit via a 3-step secured flow (token → encrypt → import), TLS 1.2 — callable by any plugin.
- **Digital signing — patient certificate registration:** Module that issues and registers digital certificates for patient documents, wired into the EMR signing flow.
- **Personal — codeassist, AI coding agent (C#/.NET 8):** Terminal agent on the Anthropic SDK running an **agentic tool-use loop** (six path-confined tools, conversation memory, xUnit + GitHub Actions CI) with a **live in-browser demo**. Applied to my own legacy ASP.NET MVC.

AI-Assisted Development — *June 2026 - Present*

GitHub: github.com/danghandsome/codeassist

Description : Uses AI coding assistants and prompt engineering as part of the daily workflow to work faster and keep quality high on a large legacy codebase.

- Writes **targeted prompts** to trace bugs across UI, API and data layers and pinpoint root causes in unfamiliar plugins.
- Drives AI to **review code and refactor anti-patterns** ($O(n^2)$ loops, N+1 lookups) while enforcing naming and logging conventions.
- Generates **boilerplate and module documentation** from templates, then reviews and corrects the output before committing.

- HTML, CSS, SCSS
- Javascript, jQuery
- Responsive design

ENGLISH

- Capable of comprehending English documents.
- Communicate and work with colleagues in English.

ACTIVITIES

- IT Job Fair / IT Career Open Days
- Voluntary blood donation activity
- AI workshop

- Goes beyond chat — **builds custom AI tooling** (an agentic coding CLI, reusable prompt workflows) and keeps a **human-in-the-loop review** on every AI-made change.

Delicado furniture e-commerce website *Jun 2024 - Aug 2024*

GitHub: github.com/danghandsome/NoiThat_ASP.NET_MVC

Team size : 2 (Team Member - Backend Developer)

Description : An ASP.NET MVC e-commerce site offering a refined shopping experience for elegant home furnishings — product, order, cart and wishlist management.

Responsibilities :

- Programming and developing login functions using **Facebook** and **Google** APIs, utilizing Meta for Developer and Google Authentication.
- integrating **chatbox** feature with Meta Business Suite API.
- Recently modernized (2026): assisted by my **codeassist** agent.

Technologies : ASP.NET MVC, C#, ENTITY FRAMEWORK, HTML/CSS/JAVASCRIPT, BOOTSTRAP, SQL SERVER, API, GIT.
